

Frontend Assessment

This task requires you to build the client side of "🎸 VBI Music App" using any javascript framework of your choice. [The link to the description of VBI Music App at the end of this page.](#)

The playlist and albums information are to be **cached in the local storage**

Deliverables

- URL for the final code of the API server in a public Github repository
- The URL of a deployed version of the app in Netlify or a similar free hosting service mentioned in readme.md

Use the following REST APIs to fetch the data (as you are not expected to build a server in the frontend assessment)

- Albums API: <https://jsonplaceholder.typicode.com/albums>
- Songs API: <https://jsonplaceholder.typicode.com/photos> (The photos API contains the list of songs in each album along with its thumbnail image)
- The URL Params and queries information can be found in <https://jsonplaceholder.typicode.com/>

Assessment Criteria

You will be assessed on the following parameters

- UI/UX Look and Feel
- Functionality
- Code Quality
