

# VBI Music App

VBI Music app enables the users to do the following

- Lists all the songs available in various albums and with the ability to search for a song
- Enables the user to create a custom playlist and add songs to it
- Enables the user to randomly shuffle all the songs in every playlist

Here is a sample low fidelity wire-frame of the requirement. Feel free to add in your creative inputs to make the app look and function better

In the landing page, the user is navigated to the All Songs tab where a list of all the songs are displayed

All Songs Listing

All Songs		Playlists
Search for songs...		
Song Title Singers Album	Play Time	
Song Title Singers Album	Play Time	
Song Title Singers Album	Play Time	

In the playlists tab, the user should be able to create playlists and navigate into each one of it
